Alumni

Does the curriculum demand the teachers for research inclusive teaching?

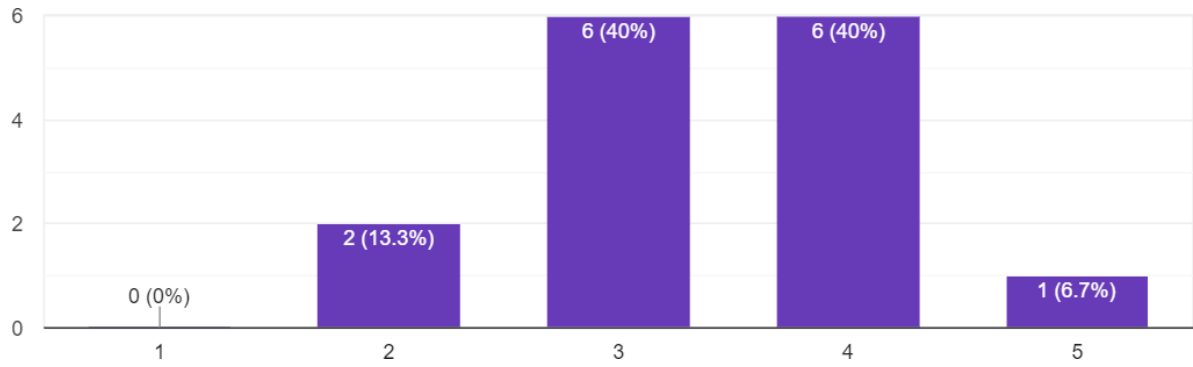

Does the curriculum enable the students to apply their knowledge in real life?

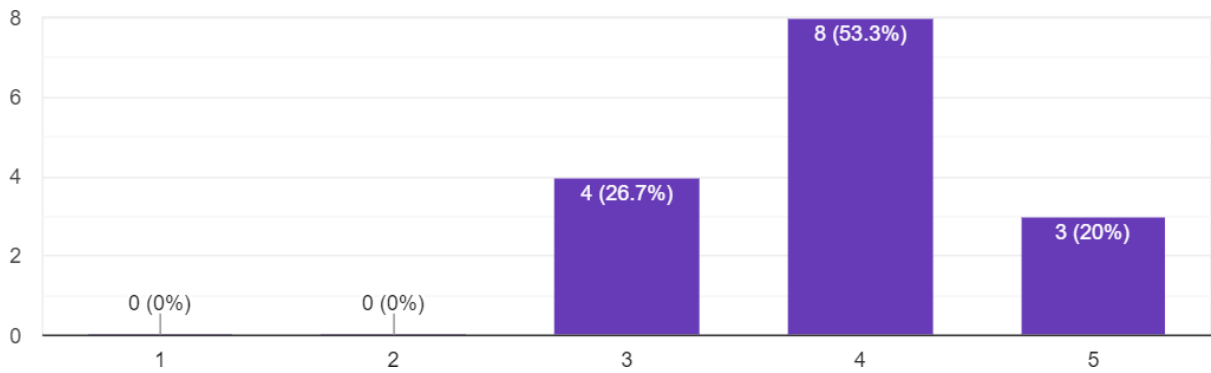

Student

Do you have continuous processes to propose, modify, suggest and incorporate new topics in the curriculum?

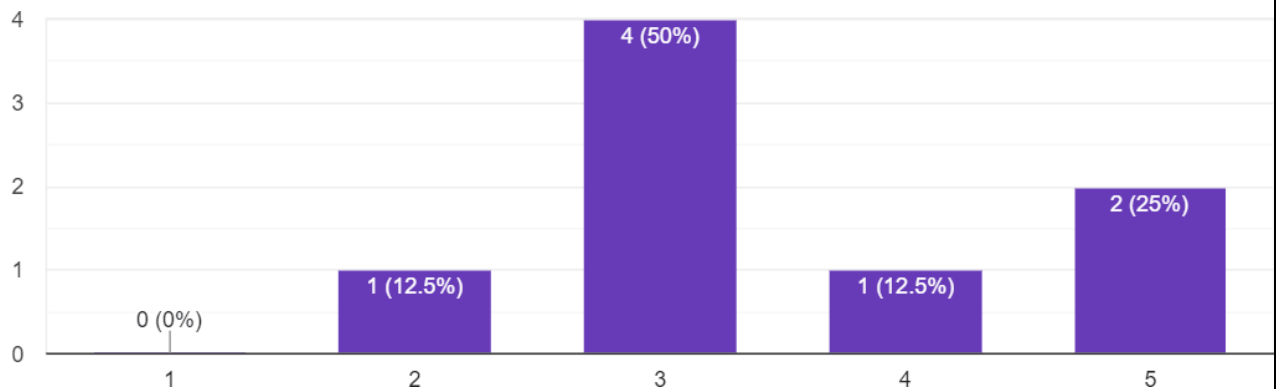

Is the curriculum effective in developing independent thinking?

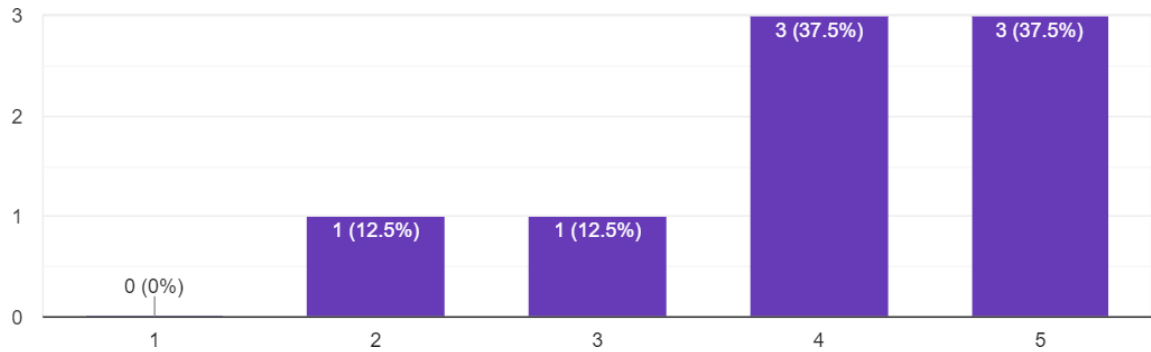

Industry

Does the curriculum cover advanced topics?

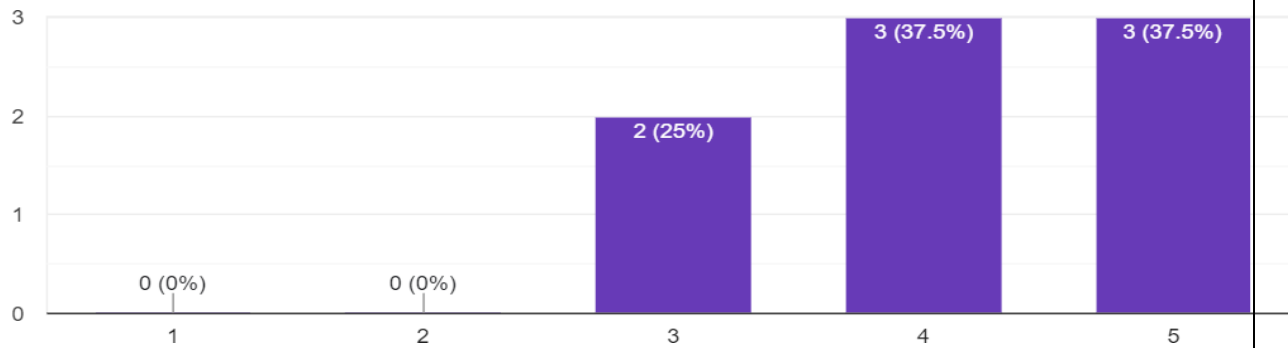

Is the curriculum effective in developing critical/ analytical thinking?

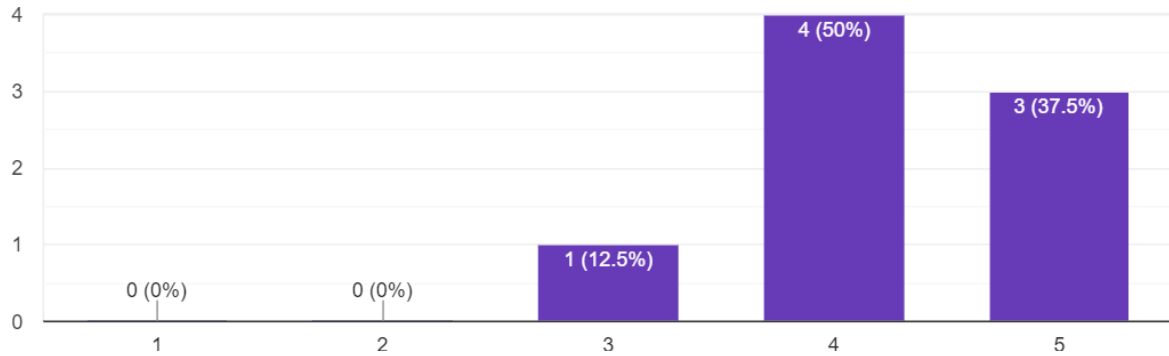

Teachers

Does the curriculum satisfy the stated objectives and learning outcomes?

Is the curriculum effective in developing independent thinking?

Curriculum Feedback Comments Received in Each Category

Alumni

1. The course should be more industry oriented. It's improving every year, the pace should increase. Overall, a wonderful experience.
2. I was delighted with the curriculum and derived the most out of it
3. Delighted and elated to have been a student of Economics and an alum of Christ University.
4. The curriculum satisfy the stated objectives and learning outcomes
5. Well designed program
6. Good learning experience
7. The syllabus for masters needs to be more ISI level. It should be more mathematically driven as that would help people who are pursuing higher education.
8. Please include real world scenarios while discussing theories and it will definitely help in critical thinking aspects to solve economic problems, in discussion based forums
9. Best department in Christ University

Student

1. All aspects pertaining to the department, faculty, and the quality of instruction are truly commendable.
2. Good
3. It really helped me grow as a person and I'm grateful to this program and the teachers
4. This curriculum, which was designed to help students succeed after they finish the course, is incredibly engaging, challenging, and valuable.
5. It was a very challenging and good course
6. It was a satisfactory course
7. The curriculum is very interesting, however academic courses like business analytics should be emphasized more because they have a higher edge when we apply outside the college for placements and therefore the importance given is high.
8. The course can be improved by including corporate oriented teaching as well along with research oriented.
9. The overall program is good.
10. The syllabus for some subjects should be reduced because it is too large to cover in the allotted period.
11. I am satisfied
12. Needs many improvements
13. There should be a choice between an internship and a dissertation during the final year.
14. Needs many improvements
15. No comments. Everything went fine for me
16. All together our curriculum was quite engaging and full of new concepts and knowledge. A suggestion is Maths or Statistics should be made mandatory for the third years because its very important in all the fields not only in corporate but also for higher studies. Thank you for all the support and opportunities. Thank you.
17. Bring in lot of current examples
18. I think it was a satisfactory course
19. I feel inclusion of electives like Banking would be helpful as few students look forward to studying it in detail.
20. Some subjects are very vast.
21. The CIA's of most subjects were quite boring. It only required writing pages or presentations which students did with chat gpt mostly. It would be interesting if there were field trips or activities that required collecting knowledge first hand so as to enhance the overall learning.
22. More project-oriented CIAs for all the subjects. If possible there should be capstone projects for the software like in Business Analytics. Also, merging two subjects makes it difficult to finish the syllabus and one-half of it remains majorly self-study like in

Economics of Health & Education or International Economics and Finance. If there could be a way to tackle the same, it would be appreciated. Curriculum is very good
23. Overall, it was a comprehensive course. However, there can be better faculty for some subjects.

Industry

1. As personal experience, I would suggest that the students can be made to learn a specific language and that too really well. (Like specializing in one language and tool)
Rest the program was Excellent.
2. It was a good experience. Still, there is a lot that needs to be done. Especially the industry demands, like Data Analytics, AI and communication.
3. More real-world scenarios need to be discussed and the application of the concepts to relate, is much needed. More requirements in the industry for such individuals is seen.
4. The curriculum is well crafted, developed and imparted by professors in the dept of Economics. I owe a great deal of my understanding of the social and economic world to the program and my professors

Parent

Teachers

1. Including more learning components that are experiential in nature
2. To bring in multiple perspectives of different schools of thought economics in theoretical papers
3. New papers which are contemporary can be added
4. Curriculum is good.
5. Feedbacks might improve curriculum design
6. In the total the curriculum seems to be good, hence there is always a chance left for revision and improvement
7. The collaboration with the foreign universities and the industry enables the Department to keep the standard of the curriculum high.

ACTION TAKEN BASED ON FEED BACK

1. For improving the industry connect, the department organised various alumni talks to give our students a good perspective on the changing nature of job markets and the need to constantly reinvent and reskill.
2. Based on the Feedback, the department separated the contents of econometrics from the core statistics paper. However, the basic econometrics paper was introduced in the final semester as an elective for those students willing to pursue further.
3. To enhance analytical capabilities, advance courses in excel and introduction to bloomberg data sets are considered.
